I. INTRODUCTION

The Defense Logistics Agency Materiel Readiness Support (MARS) System provides a method for you to obtain statistics about DLA's supply performance. The full capabilities of MARS allow for analysis of historical support to a weapon system(s) and/or organizational unit(s), predictions of future support to weapon systems, nonweapon systems, and/or a Service, and analysis of item data.

The prompting program described here is concerned with historical or future support and attempts to bridge the gap between the end user and the computer by providing a semiautomated means to generate the necessary computer commands (JCL for Job Control Language) to execute the required parts and functions within MARS.

In order to use the prompting program, you will need to have access to the Operations Research and Economic Analysis Office (DLA-LO) computer at the Defense General Supply Center (DGSC).

The prompting system will do most of the work for you. You will need to respond to questions which the prompting program will ask. You will need to know what are proper responses and the kind of statistics you are attempting to obtain. For further information on statistics or input values, please refer to the MARS System Manual. (106) ←

II. ACCESSING THE DLA-LO COMPUTER AND STARTING THE DLA MARS PROMPTING PROGRAM. Using the IBM 3278 terminals, follow the standard procedures for signing on to the DLA-LO computer:

Step:

1. Turn up terminal brightness knob.
2. Type the following:

LOGON USERID and press ENTER. Any system authorized
USERID can access the MARS system.

If USERID is incorrect, you will receive the message:

USERID XXXXXXX NOT AUTHORIZED TO USE TSO
REENTER -

Type your 7-character USERID and press ENTER.

You will next be prompted for your USERID password. Key in your PASSWORD and press ENTER.

Once your USERID and PASSWORD are accepted, your LOGON will proceed.

3. Several other messages will appear followed by the message:

***PRESS ENTER TO CONTINUE

4. You should have the SPF/MVS Primary Option Menu on your screen. Enter: '6' on the option line and press ENTER. This will invoke the Time-Sharing Option on the DLA-LO computer.

5. On the command line, enter the command:

MARS

You will now receive the introduction to the MARS system and begin entering the data for your analysis.

III. MARS INTRODUCTION PROMPTS

A. General. Once you have accessed the DLA-LO computer and executed MARS, you will receive the following prompts and messages:
